This Report is a co-publication commissioned by UNESCO from the International Social Science Council (ISSC).

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of UNESCO or ISSC concerning the legal status of any country, territory, city or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries.

The 2010 WSSR editorial team is responsible for the choice of articles, the overall presentation, introductions and conclusions. Each author is responsible for the facts contained in his/her article and the opinions expressed therein, which are not necessarily those of UNESCO or ISSC and do not commit either organization.

The preparation of the 2010 *World Social Science Report* was financed as part of UNESCO's framework agreement with the ISSC, and by generous contributions from the Norwegian Agency for Development Cooperation (NORAD), the UK's Economic and Social Research Council (ESRC) and the Swedish International Development Cooperation Agency (Sida). The Report benefited further from the support of the European Science Foundation (ESF), the Stiftelsen Riksbankens Jubileumsfond, Sweden, and the University of Bergen, Norway.

In addition the fifteen universities listed below have contributed as Partners-in-Publishing to financing the preparation of the Report:

Freie Universität Berlin (Germany)
Heriot-Watt University (United Kingdom)
Institute of Education, University of London (United Kingdom)
Jacobs University, Bremen (Germany)
London School of Economics and Political Science (United Kingdom)
Norwegian School of Management, Oslo (Norway)
University College London (United Kingdom)
University of Edinburgh (United Kingdom)
University of Essex (United Kingdom)
University of Exeter (United Kingdom)
University of Glasgow (United Kingdom)
University of Leicester (United Kingdom)
University of Manchester (United Kingdom)
University of Nottingham (United Kingdom)
University of Stavanger (Norway)

The print edition of the Report is available from UNESCO Publishing: www.unesco.org/publishing

The Report is available on line at: www.unesco.org/shs/wssr

Foreword

I welcome the publication of the 2010 *World Social Science Report*, the first thorough overview of this important field in more than a decade. Edited by and co-published with the International Social Science Council (ISSC), it is the product of the active engagement of hundreds of professional social scientists who have contributed their expertise to make this publication a reference.

The Report reaffirms UNESCO's commitment to the social sciences, and our desire to set a new global agenda to promote them as an invaluable tool for the advancement of the internationally agreed development goals. UNESCO, with its emphasis on the management of social transformation, is concerned that the social sciences should be put to use to improve human well-being and to respond to global challenges. As long ago as 1974, UNESCO's General Conference adopted a Recommendation on the Status of Scientific Researchers which emphasized 'the need to apply science and technology in a great variety of specific fields of wider than national concern: namely such vast and complex problems as the preservation of international peace and the elimination of want'.

Today, the social sciences bring greater clarity to our understanding of how human populations interact with one another, and, by extension, with the environment. The ideas and information they generate can therefore make a precious contribution to the formulation of effective policies to shape our world for the greater good.

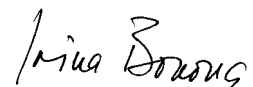

Yet, social scientific knowledge is at risk in the parts of the world where it is most needed. The huge disparities in research capacities across countries and the fragmentation of knowledge hamper the capacity of social sciences to respond to the challenges of today and tomorrow. While we may be building a 'knowledge society', it is one that looks very different depending on one's regional perspective. Social scientists produce work of outstanding quality and tremendous practical value, but, as this Report illustrates, social scientific knowledge is often the least developed in those parts of the world where it is most keenly needed – hence this publication's title, 'Knowledge Divides'.

Global divides reproduce themselves in each generation, in our institutions and in our methods of creating and using knowledge. Global divides affect all indicators of human development, hampering the accumulation, transmission and use of knowledge in our societies, to the detriment of equitable development. Consider the world's one billion poorest who live on less than US\$1.25 per day. There is a consensus that their lot should urgently be improved but why do well-intentioned policies so often produce so little? We may, perhaps, need better intentions; we certainly need better and more accessible knowledge that can provide policies with the evidence that they need to make a difference.

Social scientific endeavour is also poorer for its bias towards English and English-speaking developed countries. This is a missed opportunity to explore perspectives and paradigms that are embedded in other cultural and linguistic traditions. A more culturally and linguistically diverse approach by the social sciences would be of tremendous value to organizations such as UNESCO in our efforts to foster mutual understanding and intercultural dialogue.

All these findings are profoundly challenging – they emphasize that without conscious and coordinated effort, the drift of the global social science landscape is towards fragmentation, lack of pluralism and estrangement between scientific endeavour and social needs. Clearly, institutions matter hugely for research performance. But their strength can hardly be taken for granted in today's economic circumstances. The production of rigorous, relevant and pluralistic social science knowledge requires international coordination, a long-term vision and a stable environment.

I am confident that this Report will help to galvanize the energies of all of those who are concerned to see the social sciences flourish in the years to come.

Irina Bokova

Director-General of UNESCO

Foreword

By its Constitution, by its programmes, by its whole ethos, UNESCO is committed to the view that knowledge should bring together and unify. The publication of a report entitled 'Knowledge Divides' – which emphasizes the huge disparities in research capacities across countries and the fragmentation of knowledge that hamper the capacity of the social sciences to respond to the challenges of today and tomorrow – is therefore at once an opportunity and a challenge. From both perspectives, I take great pleasure in welcoming the 2010 World Social Science Report.

The opportunity, responding to the conclusions of the Report, is to reaffirm our commitment to the importance of the social sciences and to set a new global agenda to promote them. And 'our' is, here, no mere figure of speech. The 2010 *World Social Science Report* is a genuinely collaborative effort. It brings together under one banner the International Social Science Council (ISSC), the primary professional umbrella organization of social science, and UNESCO, an intergovernmental organization with 193 sovereign Member States serving policy communities as a capacity-builder and a broker of scientific knowledge. It builds, furthermore, on the active engagement of hundreds of professional social scientists who have contributed in various ways to its development: as authors, as editorial board members, as reviewers or as participants in the World Social Science Forum successfully convened by the ISSC in Bergen, and organized in cooperation with the University of Bergen and the Stein Rokkan Centre for Social Studies, Norway, in May 2009.

The very existence of the Report shows that knowledge divides in the social sciences are not insurmountable. Nonetheless, its findings are profoundly challenging. They emphasize that, without conscious and coordinated effort, the drift of the global social science landscape is towards fragmentation, lack of pluralism and estrangement between scientific endeavour and social needs. The production of rigorous, relevant and pluralistic social science knowledge requires a long-term vision and a stable environment. As the findings of the 2010 *World Social Science Report* clearly show, institutions matter hugely for research performance. But their strength can hardly be taken for granted in today's economic and financial circumstances.

As a consequence of fragmentation, we may be building a 'knowledge society', but it is one that looks very different depending on one's regional perspective. Global divides affect all indicators of human development, hampering the accumulation, transmission and use of knowledge in our societies, to the detriment of equitable development. Global divides reproduce themselves in each generation, in our institutions and in our methods of creating and using knowledge.

Consider, for example, those that Paul Collier, in his award-winning 2007 book, called the 'bottom billion' – those living in 'extreme' poverty on less than US\$1.25 per day. There is a consensus, in principle, that their lot should urgently be improved. But how should this be done – and why do well-intentioned policies so often produce so little? We may, perhaps, need better intentions; we certainly need better and more accessible knowledge that can provide policies with the evidence that they need to make a difference.

UNESCO, with its ethical mandate, and through its Management of Social Transformations (MOST) Programme, is concerned that the social sciences should be put to use to improve human well-being, with a view in particular to achieving the Millennium Development Goals and responding to other global challenges, such as the social impacts of climate change. Yet, social scientific knowledge is at risk in the parts of the world where it is most needed because it is neither generated, nor transmitted, nor used. In too many places, even a proper census cannot be carried out.

Another highly significant divide is language. As the 2010 *World Social Science Report* shows, the production and circulation of social science are heavily biased towards English and towards the countries where English is most widely spoken in academic circles. Such linguistic hegemony does not merely create barriers to the participation of those scholars whose English is inadequate for academic communication. It also, and much more importantly, crowds out perspectives and paradigms that are embedded in other linguistic and cultural traditions – thereby impoverishing the social sciences as a whole.

The linguistic question is of great importance from a UNESCO perspective, especially in 2010, the International Year for the Rapprochement of Cultures, for which UNESCO has the lead role within the UN system. The goal of the International Year is to celebrate the world's cultural diversity and help strengthen dialogue among cultures. Ensuring greater linguistic pluralism in international social science will, in this respect, not just strengthen social science. In so far as social science is one aspect of the self-understanding of contemporary societies, linguistic pluralism will also contribute directly to a truly global, and appropriately diverse, self-understanding.

Furthermore, Article 27.1 of the Universal Declaration of Human Rights stipulates that everyone has the right to share in scientific advancement and its benefits. This is not the best known of the fundamental human rights, but it is not the least important. In so far as social science provides benefits – which are the corollary of the damage bad social science can do, via misguided policies – it is essential and urgent to create the conditions in which they can be truly shared. The knowledge divides identified by the 2010 *World Social Science Report* are barriers to such sharing. They are thus among the key challenges that need to be addressed by the international community, by each state at its own level, and by national and international scientific associations.

As long ago as 1974, the UNESCO General Conference adopted a Recommendation on the Status of Scientific Researchers which, among other things, emphasized 'the need to apply science and technology in a great variety of specific fields of wider than national concern: namely, such vast and complex problems as the preservation of international peace and the elimination of want and other problems which can only be effectively tackled on an international basis'. After more than a third of a century, the world has not lived up to this commitment. It is time to take it seriously, and for that we need social science to take its place in an integrated landscape of science and technology, and policy-makers to listen – among other voices – to what social science has to say. The 2010 *World Social Science Report* makes a welcome and valuable contribution to these crucial tasks.

Pierre Sané

Assistant Director-General for
Social and Human Sciences
UNESCO

Preface

One planet, worlds apart – same map?

A celebration of success

Never before have there been so many social scientists in the world – many more than the 200,000 population of Margaret Mead’s famous Samoa. Never before have the social sciences been so influential: economists run ministries of finance, political scientists staff public administrations and MBAs run corporations. Indeed, social scientists have not just entered boardrooms, but since Kinsey also bedrooms. Never before have social scientists had such an impact on public opinion, in terms of both how the world is seen and how it is acted upon. Terms that were once specialized – for example, ‘comparative advantage’ or ‘self-fulfilling prophecy’ – dot the media and have entered everyday language. However, in spite of this impact, humans face crises that tax their understanding and their capacity to cope.

Social science: a mixed blessing

Social scientists’ foresight has been poor at key junctures, and social science’s influence a mixed blessing. Social scientists did not foresee the fall of the Berlin Wall in 1989, which was afterwards prominently interpreted as ‘the end of history’¹ – the final victory of constitutional democracy and free markets. As the current economic crisis was unfurling in October 2008, Alan Greenspan, recognized as ‘the maestro’, and the chair of the US Federal Reserve from 1987 to 2006, conceded that his free-market conception of shunning regulation was deficient. ‘Yes, I found a flaw’, he said in a congressional hearing: ‘That is precisely the reason I was shocked because I’d been going for 40 years or more with very considerable evidence that it was working exceptionally well.’² His social science map no longer provided guidance. In Malawi, the World Bank has undertaken self-criticism for pushing private markets, opposing government regulation and fertilizer subsidies aimed at promoting cash crops for exports – a policy that resulted in food shortages.³ More broadly, from Marx and Myrdal to the Washington consensus, development theories have been only modestly successful.

Furthermore, part of the diagnosis of the present global economic predicament is that social scientists were instrumental in constructing – or misconstruing – both the toxic ‘financial instruments’ and flawed institutions. More than that, social scientists, sometimes for opportunistic reasons, did not understand how their own creation worked or monitor how it unfolded. In short: if it is not good when the social science models of the world are misconstrued, it is even worse when its models for the world lead to misconstruction of the world itself.⁴

A confluence of crises, increasing demand for social science

Notwithstanding these, and no doubt other, problems, the demand for more social science and better social science is likely to increase. This is the result of the state of the world, and more specifically of what could be called ‘a confluence of crises’: that is, contemporary crises that mutually reinforce one another. The climate is worsening, largely as a result of human activities, and the consequences of this change will be dire for humans. Given modern modes of travel, epidemics can spread faster than at any previous time in human history. Economically, the world faced the worst global crisis since the 1930s in 2008–09. Social conflicts arising from divergent religious worldviews have multiplied. These crises prove that the planet is one indeed, and one commons at that.

The planet is becoming more crowded – more than 2 billion people will be added to the global population over the next 40 years.⁵ The world’s population is not just growing, it is also greying, with dependency ratios increasing on all

continents.⁶ The number of poor may also be increasing.⁷ Obtaining food is becoming precarious for more millions of people across the globe: the first Millennium Development Goal, the eradicating of extreme poverty and hunger by 2015, may be unattainable.⁸ Water resources are becoming scarcer; nearly 900 million people have inadequate access to safe drinking water, while about 2.5 billion have inadequate access to water for sanitation and waste disposal.⁹ The crises affect those worst off most adversely.

The net outcome of this confluence of crises is that conflicts, old and new, increase and intensify. They are exacerbated by several factors. One is that the peoples of the world are more tightly coupled in the sense that impacts from one country spread wider, faster and stronger than at any time before in human history. We learned from the present economic crisis that Asian and Latin American countries were not decoupled from the American or European economies or vice versa; rather, impacts cascaded and ricocheted around the world in less than eighty days. We have learned from AIDS, SARS and the H1N1 ('swine') flu virus that no country is an island to itself, and that viruses travel without passports. What happens to a country is increasingly decided outside its own borders. The fact that we live on one planet means that there are no safe havens. Wise responses depend on our understanding of how the world works and how it can be changed.

Social science emerging from the Enlightenment and the Industrial Revolution

To a great extent, the social sciences grew out of the seventeenth-century European Enlightenment, when new ideas about religion, reason, humanity and society were merged into a fairly coherent worldview that stressed human rights, individualism and constitutionalism. Studies of alien societies were used as a contrast when analysing a country's institutions and customs. A range of new, fundamental conceptions was articulated, for example:

- about the autonomy of the individual and inviolable rights
- about individual freedom and the sovereignty of the people
- about the tripartition of state power and the independence of the state from religious supremacy
- about the unfairness of inherited privileges
- about the principles for organizing a market economy.

Equally basic to the birth of Modernity was the recognition that a plurality of opinions and an open, critical debate were necessary to gain new insights and for citizens to forge their own history. Education for all, including women, was articulated as a political goal. A free press and the dissemination of knowledge were regarded as a means for enlightenment and personal development. Power, it was argued, could only be legitimate if it promoted the welfare of the people. Even today, many of these issues remain contentious.

The development of social theory has accelerated in periods of rapid social change. For example, the Industrial Revolution was accompanied by an intellectual revolution: that is, a fundamental change in the thinking about how the economy works and what the guiding principles for economic policy should be. A key part of the analysis focused on the divergence between, on the one hand, the increase in the output and wealth of nations, and on the other, the effects of competition on the conditions of workers; that is, the impact of unfettered capitalism on social dislocation and the misery of labourers, including women and children. This story about the changing interrelationship between industrial production and social conditions is not history. It is an unfolding story of life on the globe, now called globalization, which signifies an ever more unfettered flow of goods, monies, peoples and ideas. Globalization has been justified and accelerated by social theories, but in turn, it challenges social sciences' current understanding of the continuing processes.¹⁰

 10. Three examples are Francis Fukuyama (1992) *The End of History and the Last Man*, New York: Free Press; Samuel P. Huntington (1996) *The Clash of Civilizations and the Remaking of World Order*, New York, Simon & Schuster; and Joseph E. Stiglitz (2002), *Globalization and its Discontents*, New York: Norton, each of which has generated extensive debate.

Crises are not anticipated

The themes introduced above are not new, but are still topical. They have been addressed and analysed for two centuries; rethinking them today is, however, timely and pertinent. They concern all the social sciences, since not just national economies are changing, but also ethnic boundaries, institutional arrangements, cultural habits and individual mindsets. In other words, living on one planet integrated by advancing technologies, expanding exchange and real-time communication means a mismatch between globalization and governance; that is, between the reach and adversity of impacts and the range and ability of existing institutions to deal with them. Few people anticipated the present confluence of crises. The question is whether we did not see it coming because we used the wrong spectacles, or simply because we never looked properly, even after the first whistles were blown. There is also considerable professional disagreement on what is to be done, on effective remedies and the impacts these may have on what will happen in the near or distant future. Social scientists clash on many of these crucial questions.

The state of the art: what should be the ambition?

In many ways, the social sciences themselves are fragmented. Indeed, some argue that the disciplines are in disorder, that there is not one 'social science' but many; rather than one paradigm, there are competing schools. This is a problem because we are increasingly made aware that while we live on one planet, we belong to worlds apart. And if the social sciences are not even on the same map, what should be done? Does a more integrated world require a more integrated social science?

Several attempts at Grand Theory have been challenged or have disintegrated: for example, Marxism, structural functionalism, also socio-biology and the neoclassical synthesis. Should we retain this (grand-theoretical) ambition? Is there one social science or many? Should we strive for what physicists call 'a theory of everything'? Can there be a single encompassing theory of all human behaviour? What is our situation now – what theories do we have to start with?

First of all, we have no single, generally accepted model of humanity.¹¹ We can draw on a wide range of such models, from the Freudian conception to 'administrative man',¹² and increasingly the less calculating, less predictable and partly irrational relatives of 'rational man'. As the faith in simple rational actor models has been shattered, a series of half-breeds has been developed, a whole bestiary of model actors with engaging stories about the properties they are supposed to embody. Some of the most interesting ones have been developed in cognitive psychology and behavioural economics.¹³ Amartya Sen, for one, has advised us to set aside a one-dimensional approach to human identity, which results in the 'civilizational and religious partitioning of the world', and adopt a multiplex conception.¹⁴ Is such a conception more appropriate in modern societies which function as mixing vessels for the reassortment of partial identities from different cultures and epochs?

Not only have the social sciences produced a wide range of 'humanoids' – that is, theoretical constructs that are our lookalikes – there is also a wide range of mechanisms at our disposal. These mechanisms range from self-fulfilling prophecies to prisoners' dilemmas, from cobweb models to selection models, all useful for interpreting and explicating different actual situations or events. Should our goal be to identify such mechanisms, explicate their logic and then eclectically use and combine them to explain why different social processes unfold as they do? Should our goal, as Robert Merton had it, be 'theories of the middle range'¹⁵ rather than Grand Theory? Or, as James S. Coleman argued, should we search for 'sometimes true theories'¹⁶ that are useful for interpreting and illuminating different specific phenomena, rather than strive for a Theory of Everything? In general, these and other issues and questions press on social science.

11. The term was coined by Herbert Simon (1957) *Models of Man, Social and Rational: Mathematical Essays on Rational Human Behavior in a Social Setting*, New York: Wiley.

12. The term 'administrative man' is also associated with Herbert Simon and his modifications of the classical model or 'rational man', characterized by bounded rationality and 'satisficing'.

13. Among the themes of behavioural economics is the use of rules of thumb, heuristics and cognitive bias rather than rational decisions, the framing of problems, which affects decision making and market inefficiencies. For a popular introduction to some of the topics, see Dan Ariely (2008) *Predictably Irrational: The Hidden Forces That Shape Our Decisions*, New York: Harper Collins.

14. Amartya Sen (2006) *Identity and Violence: The Illusion of Destiny*, New York: W. W. Norton.

15. Robert K. Merton (1968) 'On the sociological theories of the middle range', in *Social Theory and Social Structure*, enlarged edition, New York: Free Press.

16. James S. Coleman (1964) *Introduction to Mathematical Sociology*, Glencoe, Ill.: Free Press.

The task: simultaneously addressing the state of the world and the state of the art

What is the moral to be drawn from the state of our art? I would advocate not so much interdisciplinary research as cross-disciplinary or even integrated research: that is, research that in its very design, execution, application and presentation brings together the humanities and the natural and social sciences in joint research projects.

Climate change, and managing disasters and catastrophes, are examples of topics requiring such integrated research. Climate change is the unfolding of the forces of nature triggered by human action. We cannot change the way the forces of nature work, but we can change the ways humans act. This is why integrated research is critical for the destiny of our planet afflicted by climate change: identifying its social causes and mapping its human impacts, calculating costs and advising policies – all well within the purview of social science. Social science must help measure, assess, negotiate and organize, and in the process, help preserve human diversity and culture. The message of the Intergovernmental Panel on Climate Change is that the planet itself may be imperilled: that is, that the forces that have been unleashed through energy use or pollution, if not addressed immediately, intelligently and forcefully, may cause irreversible damage to our common global environment.

When I say 'immediately, intelligently and forcefully', I am no longer talking about natural phenomena but about human responses, about social science knowledge and about evidence-based policy making. More than that: it is a plea for integrated research where the humanities and the natural and social sciences jointly address natural phenomena, social processes, institutional design, cultural interpretations, ethical norms and mindsets.

We have to address simultaneously the state of the world and the state of the art, the course of events and our capacity to analyse and cope with them. In order to make social science relevant, pertinent and potent, we as social scientists have to scrutinize our concepts about how society works, and engage in vigorous self-examination of how our approaches fare in order to define common tasks and set a shared agenda. Societies and behaviours are forever changing – partly as a consequence of the models and interpretations of social scientists.

Hence, striving for the likeness of a theory of mechanics or the chemistry of natural phenomena unaffected by how we analyse them would be in vain. However, we can be optimistic with respect to the role that the social sciences can and must play in addressing the state of the world and the confluence of global crises that we face, even if we have to relinquish the ambition of finding an all-encompassing global theory of social behaviour and development.

Indeed, a token of the optimism is this 2010 *World Social Science Report* which UNESCO entrusted the International Social Science Council to produce. The ISSC is grateful for this challenge and the opportunity it provided for continued close collaboration with UNESCO.

Gudmund Hernes

President, International Social Science Council

Acknowledgments

This Report is the product of a cooperative effort. The selection of themes, topics and authors was made by the WSSR Editorial Team under the guidance of the Editorial Board and with the support of scholars and advisers worldwide. The authors are essentially responsible for the quality of the content of the different chapters. The editorial team wrote the different chapter presentations, introductions, unsigned articles and boxes, executive summary and overall conclusions.

The team owes a special debt of gratitude to the members of the Editorial Board, to the Chairman of this Board who is also the President of ISSC, Gudmund Hernes, and to Heide Hackmann, ISSC Secretary-General, for their constant support and guidance.

The team drew inspiration from numerous presentations made at the ISSC World Social Science Forum, which was held in Bergen, Norway, in May 2009 and was co-organized by the ISSC and the university's Stein Rokkan Centre. A number of authors were chosen from among the contributors to the Bergen World Social Science Forum.

In addition to the editorial team, numerous people advised on themes and authors, and read papers. The team is particularly indebted to Rigas Arvanitis, Anita Craig and Olivier Nay for their important suggestions, insightful comments and constant support. The team is also grateful for useful ideas from Michel Carton, Christian Fleck, Yves Gingras, Johan Heilbron, Christine Inglis, Olivier Martin, Dominique Pestre, Esteban Radiszcz, Daniel Sabbagh, Asunción Valderrama, N. V. Varghese and Yves Winkin.

Bruno Auerbach, Grégoire Chamayou and Lucy Gathier participated in the very early stages of the preparation of the Report and we acknowledge their valuable contributions.

David E. Apter passed away on 4 May, before what was possibly his last piece of writing came out in the present Report. He was a scholar who truly transcended several social science disciplines. In addition to his article, he provided support and insightful comments throughout the preparation of the Report.

We are grateful to the UNESCO Institute for Statistics (UIS) – and its Director Hendrik van der Pol – for its valuable support in the preparation of the statistical annex on the number of social scientists in the world and their production, and for providing comments on the data. We particularly thank Albert Motivans and Yanhong Zhang for education statistics and Ernesto Fernandez Polcuch and Martin Schaaper for science statistics. Likewise we are grateful to Sir Roderick Floud and Balázs Kiss of the European Science Foundation for their useful comments and support in the preparation of this annex.

We also thank all those who contributed as reviewers of the various papers and of the full Report.

The Report benefited greatly from the editorial expertise of Martin Ince, as well as that of Ilse Evertse and Edouard Morena. The team is also grateful to Joe Gillett, Sarah Houdin-Dreyfuss and to the ISSC Secretariat for their assistance.

2 The institutional geography of social science	51
Chapter presentation	53
• Social sciences in North America (Craig Calhoun)	55
• Institutional aspects of the social sciences in Latin America (Hebe Vessuri and Maria Sonsiré López)	59
• The state of social science in sub-Saharan Africa (Johann Mouton)	63
• Social sciences in the Arab world (Rigas Arvanitis, Roland Waast and Abdel Hakim Al-Husban)	68
• The status of the social sciences in China (Huang Ping)	73
• Social sciences in South Asia (Venni V. Krishna and Usha Krishna)	77

- The status of social sciences in Europe (Luk Van Langenhove) 82
- **Flash** Direction for European social science – the need for a strategy (Roderick Floud) 86
- The status of social sciences in the Russian Federation (Liudmila Pipiya) 87
- Social sciences in Aotearoa/New Zealand and the Pacific region (Robin Peace) 92
- References and background resources 94

3	Unequal capacities	99
	Chapter presentation	101
	■ 3.1 Dimensions of capacities in social sciences	101
	Introduction	101
	• Assessing research capacity in social sciences: a template	102
	• Capacity development challenges in the Arab states (Seteney Shami and Moushira Elgeziri for ACSS)	104
	• Social science research capacity in Asia (John Beaton for AASSREC)	106
	• Social science capacity-building in Latin America (Alberto D. Cimadamore for CLACSO)	108
	• Why Kenyan academics do not publish in international refereed journals (Maureen Mweru)	110
	■ 3.2 Marketization of research	112
	Introduction	112
	• The development of consultancies in South Africa (Linda Richter and Julia de Kadt)	113
	• Consultancies and NGO-based research in the Arab East: challenges arising from the new donor agendas (Sari Hanafi)	115
	■ 3.3 Brain drain or brain circulation?	117
	Introduction	117
	• The international migration of social scientists (Laurent Jeanpierre)	118
	• From brain drain to the attraction of knowledge in Latin American social sciences (Sylvie Didou Aupetit)	122
	• Brain drain and brain circulation in South Asia (Binod Khadria)	124
	• Rethinking the brain drain in the Philippines (Virginia A. Miralao)	126
	■ 3.4 Overcoming the capacity divide	128
	Introduction	128
	• Development of research capacities in the social sciences in Brazil (Regina Gusmão)	129
	• Flash Building sociology in China	133
	• Flash Developing social science capacity in Palestine (Vincent Romani)	133
	• The contribution of social science networks to capacity development in Africa (Adebayo Olukoshi)	134
	References and background resources	137

4	Uneven internationalization	141
	Chapter presentation	142
	• The globalization of research collaboration (Koen Frenken, Jarno Hoekman and Sjoerd Hardeman)	144
	• Where are social sciences produced? (Yves Gingras and Sébastien Mosbah-Natanson)	149
	• The hegemony of English (Ulrich Ammon)	154
	• Social science research in the Latin American and the Caribbean regions in comparison with China and India (Jane M. Russell and Shirley Ainsworth)	156
	• Scientific mobility and the internationalization of social science research: the case of mainland China (Koen Jonkers)	160
	References and background resources	162
5	Homogenizing or pluralizing social sciences?	165
	Chapter presentation	167
	■ 5.1 Hegemonies and counter-hegemonies	168
	Introduction	168
	• The internationalization of social sciences: distortions, dominations and prospects (Wiebke Keim)	169
	• The call for alternative discourses in Asian social sciences (Syed Farid Alatas)	171
	• Standpoint methodologies and epistemologies: a logic of scientific inquiry for people (Sandra Harding)	173
	■ 5.2 Tensions between global and local knowledge in practice	175
	Introduction	175
	• What do social sciences in North African countries focus on? (Roland Waast, Rigas Arvanitis, Claire Richard-Waast and Pier L. Rossi in collaboration with the King Abdulaziz Foundation Library)	176
	• Current topics of social science research in Japan (Thomas Brisson and Koichi Tachikawa)	180
	• Westernization of the Chinese social sciences: the case of legal science (1978–2008) (Deng Zhenglai)	182
	References and background resources	184
6	Disciplinary territories	187
	Chapter presentation	189
	■ 6.1 Disciplines and their divides	190
	Introduction	190
	• Rethinking the history of the social sciences and humanities (Peter Wagner)	191
	• The share of major social science disciplines in bibliometric databases (Koen Jonkers)	194
	• Economics and sociology in the context of globalization (Frédéric Lebaron)	197

• One social science or many? (Jon Elster)	199
■ 6.2 Crossing disciplinary borders	204
Introduction	204
• Shifting involvements: rethinking the social, the human and the natural (Björn Wittrock)	205
• The interdisciplinary challenges of climate change research (Roberta Balstad)	210
• Psychology at the vortex of convergence and divergence: the case of social change (Rainer K. Silbereisen, Pierre Ritchie and Bruce Overmier)	213
• Flash The psychology of sustainability (Victor Corral-Verdugo)	218
■ 6.3. Regional variations	219
Introduction	219
• North American social science: trends in and beyond disciplines (Craig Calhoun)	219
• Trends in social science research in India in recent times (Umamaheswaran Kalpagam)	226
References and background resources	228
7 Competing in the knowledge society	233
Chapter presentation	235
■ 7.1 Global rankings	235
Introduction	235
• The social sciences and the ranking of universities (Anthony F. J. van Raan)	237
• Alternatives to existing international rankings (Tero Erkkilä and Niilo Kauppi)	239
• A new industry: university rankings in the social sciences (Luis Sanz-Menéndez and Felix de Moya-Anegón)	242
• The world-class university and the global South (Saleem Badat)	245
■ 7.2 Assessment and evaluation of research	248
Introduction	248
• Conceptualizing and measuring excellence in the social sciences and humanities (Peter Weingart and Holger Schwechheimer)	249
• The limits of bibliometrics for the analysis of the social sciences and humanities literature (Éric Archambault and Vincent Larivière)	251
• Pros and cons of research assessment (Ellen Hazelkorn)	255
• Research assessment in the United Kingdom (Alis Oancea)	259
• Flash The assessment of social scientists in Spain (Laura Cruz-Castro and Elea Giménez-Toledo)	261
■ 7.3 Project funding and agenda-setting	263
Introduction	263
• Peer review and social science research funding (Edward J. Hackett)	264
• Research funding as selection (Peter van den Besselaar)	267
• Funding and assessment of humanities and social science research in China (Wei Lili)	269

- **Flash** An overview of Canadian social science research and funding (**Johanne Provençal**) 273
- **Flash** Research policy in a small open economy: the case of the Dutch Research Council (**Peter Nijkamp**) 274
- References and background resources 276

8 Disseminating social sciences 283

Chapter presentation 285

■ 8.1 Social sciences, education and society 286

Introduction 286

- Social science in the public space (**Alberto Martinelli**) 287
- Social science studies in secondary and higher education 290
- Social science textbooks in higher education 292
- Social scientists in the corridors of power (**Daniel Tarschys and Guy Lachapelle**) 293
- Social science doctorate holders: who are they? Where are they working? (**Laudeline Auriol**) 295

■ 8.2 Diffusing and accessing social science knowledge 299

Introduction 299

- Research monographs: an overview (**Kevin Ward**) 300
- Digitizing social sciences and humanities (**Sally Wyatt**) 303
- The roads to open access (**Pandelis Perakakis, Michael Taylor and Varvara Trachana**) 307
- **Flash** Open access to social science journals in Latin America (**Dominique Babini**) 310
- **Flash** Challenging the international academic publishing industry (**Adam Habib**) 311

References and background resources 312

9 Social sciences and policy-makers 315

Chapter presentation 317

■ 9.1 The political use and abuse of social sciences 318

Introduction 318

- Out of science – out of sync? (**Helga Nowotny**) 319
- **Flash** The politician and the researchers (**Juan Carlos Tedesco**) 323
- What social science can provide for policy-makers: the case of AIDS (**Peter Piot**) 325

■ 9.2 Evidence-based decision-making 329

Introduction 329

- Social science and policy design (**Esther Duflo and Kudzai Takavarasha**) 330
- From representative statistics to indicators of performance (**Alain Desrosières**) 333
- Mapping out the research-policy matrix: UNESCO's first international forum on the social science-policy nexus (**Christina von Fürstenberg, MOST Secretariat, UNESCO**) 335

■ 9.3 Knowledge brokers and think-tanks	337
Introduction	337
• Social science research outside the ivory tower: the role of think-tanks and civil society (Helmut Anheier)	338
• The collapsing space between universities and think-tanks (Thomas Asher and Nicolas Guilhot)	341
References and background resources	344
10 Conclusions and future lines of action	347
■ Persistent disparities in research capacities	350
■ Knowledge fragmentation: one social science? Disciplines apart? Worlds apart?	353
■ Knowledge gaps on the state of the social sciences worldwide	354
■ Directions for future action	355
Annexes	357
Annex 1. Basic statistics on the production of social sciences	359
• Measure for measure: quantifying the social sciences (Michael Kahn)	359
• Statistical tables	368
Annex 2. Bibliographical databases and repositories	386
Annex 3. Supplementary figures and tables	389
• Annex to Chapter 4	389
• Annex to Chapter 5	391
• Annex to Chapter 8	392
List of abbreviations	396
